

Adjustable Drop Seat

NEW

Width AND Depth adjust easily without the use of tools!

- Lower seat to floor height eases user foot propulsion
- Provides a solid support base under existing wheelchair cushions
- Reduces slouching and slipping which can occur with "sling-style" seats
- Seat height can be raised above or lowered below the wheelchair rails
- Allows for adjustments up to 2" in ½" increments
- Sturdy aluminum frame is strong, durable, and lightweight
- Entire unit removes easily for wheelchair folding and/or transport

Miller's Adjustable Drop Seat is designed and manufactured to increase comfort and improve posture of the user. This innovative product works with a variety of cushion sizes and styles to accommodate individual needs.

Miller's uniquely designed J-hooks "snap" securely into place over the seat rail, eliminating rattle and the need for rail locks. Constructed of composite, they will not scratch or damage the wheelchair frame.

The seat's sturdy 1/4" ABS plastic top plate can be raised 1 1/2" (4 cm) above the mounting rail or lowered 1" (2 cm) below the rail for maximum comfort and proper seat positioning. The Adjustable Drop Seat is available in six top plate sizes, and designed to easily accommodate most wheelchair frames. Custom sizes and modifications are available.

This product is specifically designed for wheelchairs which are 16"-20" wide, and for users under 300 pounds.

"Snap" securely into place

Adjustable Seating Angles:

Front-to-backfor anterior/posterior positioning

Side-to-sideto accommodate a fixed pelvic obliquity

Cross-member slides to easily adjust width and depth
