

MODULAR ADJUSTABLE HEADPAD SYSTEM

This modular headpad system was designed to provide head and neck support for clients with diminished head control or complex support requirements. The headpad provides posterior support of the head in upright, reclined, and tilted chair positions. The facial pads articulate at two separate joints and allow the assembly to be widened, narrowed, raised, or lowered on either side to provide maximum support and comfort. A variety of connecting bar lengths can be selected to individually position the facial pads at the desired distance from the main headpad.

- Provides posterior and lateral head and neck support
- Two multi-axis adjustment points for preferred headpad and facial pad positioning
- Ideal for use with clients who get "hooked" around the edge of headpads
- Use with any Miller's 7/8" ball - adjustable, fixed, or dynamic headrest hardware

Miller's Modular Adjustable Headpad Components

- 92900 Headpad, 10"x4.75"
- 92930 Facial Pad, Rectangular, 5.75"x4.75"
- 92940L Facial Pad, Notched-Left, 6.75"x4.75"
- 92940R Facial Pad, Notched-Right, 6.75"x4.75"

MODULAR ADJUSTABLE HEADPAD SYSTEM

The facial pads are modular components that can be used in any desired combination to provide lateral support to maintain your client's head and neck position. These rectangular and notch-shaped facial pads can be independently adjusted to maintain full facial contact along the surface of the pad. The notch-shaped facial pads (#92940L shown above) have a 3"x2" cutout along the anterior bottom edge to allow for pressure sensitive or contact relief areas and can be used on either side, notch up or down, to suit your client's needs.

- Provides posterior and lateral head and neck support
- Two multi-axis adjustment points for preferred headpad and facial pad positioning
- Ideal for use with clients who get "hooked" around the edge of headpads
- Use with Miller's 7/8" ball - adjustable, fixed, or dynamic headrest hardware
